3D Flash Memories

3D Flash Memories

This book walks the reader through the next step in the evolution of NAND flash memory technology, namely the development of 3D flash memories, in which multiple layers of memory cells are grown within the same piece of silicon. It describes their working principles, device architectures, fabrication techniques and practical implementations, and highlights why 3D flash is a brand new technology.

After reviewing market trends for both NAND and solid state drives (SSDs), the book digs into the details of the flash memory cell itself, covering both floating gate and emerging charge trap technologies. There is a plethora of different materials and vertical integration schemes out there. New memory cells, new materials, new architectures (3D Stacked, BiCS and P-BiCS, 3D FG, 3D VG, 3D advanced architectures); basically, each NAND manufacturer has its own solution. Chapter 3 to chapter 7 offer a broad overview of how 3D can materialize. The 3D wave is impacting emerging memories as well and chapter 8 covers 3D RRAM (resistive RAM) crosspoint arrays. Visualizing 3D structures can be a challenge for the human brain: this is why all these chapters contain a lot of bird's-eye views and cross sections along the 3 axes.

The second part of the book is devoted to other important aspects, such as advanced packaging technology (i.e. TSV in chapter 9) and error correction codes, which have been leveraged to improve flash reliability for decades. Chapter 10 describes the evolution from legacy BCH to the most recent LDPC codes, while chapter 11 deals with some of the most recent advancements in the ECC field. Last but not least, chapter 12 looks at 3D flash memories from a system perspective.

Is 14nm the last step for planar cells? Can 100 layers be integrated within the same piece of silicon? Is 4 bit/cell possible with 3D? Will 3D be reliable enough for enterprise and datacenter applications? These are some of the questions that this book helps answering by providing insights into 3D flash memory design, process technology and applications.

From reader reviews:

Sheila Cyr:

Do you have favorite book? When you have, what is your favorite's book? Reserve is very important thing for us to learn everything in the world. Each book has different aim or even goal; it means that book has different type. Some people feel enjoy to spend their time to read a book. These are reading whatever they have because their hobby is usually reading a book. What about the person who don't like studying a book? Sometime, person feel need book after they found difficult problem or perhaps exercise. Well, probably you should have this 3D Flash Memories.

Donald Perkins:

This 3D Flash Memories are usually reliable for you who want to be a successful person, why. The main reason of this 3D Flash Memories can be one of many great books you must have will be giving you more than just simple reading through food but feed you actually with information that maybe will shock your prior knowledge. This book is actually handy, you can bring it just about everywhere and whenever your conditions both in e-book and printed people. Beside that this 3D Flash Memories forcing you to have an enormous of experience like rich vocabulary, giving you demo of critical thinking that we all know it useful in your day activity. So , let's have it and luxuriate in reading.

Kathryn Mullins:

Do you have something that that suits you such as book? The guide lovers usually prefer to select book like comic, brief story and the biggest an example may be novel. Now, why not attempting 3D Flash Memories that give your pleasure preference will be satisfied by means of reading this book. Reading behavior all over the world can be said as the method for people to know world better then how they react in the direction of the world. It can't be mentioned constantly that reading habit only for the geeky particular person but for all of you who wants to be success person. So , for all of you who want to start reading through as your good habit, it is possible to pick 3D Flash Memories become your own starter.

Marilyn Perez:

Do you like reading a publication? Confuse to looking for your favorite book? Or your book seemed to be rare? Why so many issue for the book? But any people feel that they enjoy regarding reading. Some people likes studying, not only science book but additionally novel and 3D Flash Memories or maybe others sources were given information for you. After you know how the truly great a book, you feel would like to read more and more. Science guide was created for teacher as well as students especially. Those guides are helping them to put their knowledge. In some other case, beside science book, any other book likes 3D Flash Memories to make your spare time far more colorful. Many types of book like this.
