Statistical Methods for Environmental Pollution Monitoring

Richard O. Gilbert

Statistical Methods for Environmental Pollution Monitoring Richard O. Gilbert

This book discusses a broad range of statistical design and analysis methods that are particularly well suited to pollution data. It explains key statistical techniques in easy-to-comprehend terms and uses practical examples, exercises, and case studies to illustrate procedures. Dr. Gilbert begins by discussing a space-time framework for sampling pollutants. He then shows how to use statistical sample survey methods to estimate average and total amounts of pollutants in the environment, and how to determine the number of field samples and measurements to collect for this purpose. Then a broad range of statistical analysis methods are described and illustrated. These include:

- * determining the number of samples needed to find hot spots
- * analyzing pollution data that are lognormally distributed
- * testing for trends over time or space
- * estimating the magnitude of trends
- * comparing pollution data from two or more populations

New areas discussed in this sourcebook include statistical techniques for data that are correlated, reported as less than the measurement detection limit, or obtained from field-composited samples. Nonparametric statistical analysis methods are emphasized since parametric procedures are often not appropriate for pollution data. This book also provides an illustrated comprehensive computer code for nonparametric trend detection and estimation analyses as well as nineteen statistical tables to permit easy application of the discussed statistical techniques. In addition, many publications are cited that deal with the design of pollution studies and the statistical analysis of pollution data. This sourcebook will be a useful tool for applied statisticians, ecologists, radioecologists, hydrologists, biologists, environmental engineers, and other professionals who deal with the collection, analysis, and interpretation of pollution in air, water, and soil.

From reader reviews:

Effie Morris:

Inside other case, little men and women like to read book Statistical Methods for Environmental Pollution Monitoring. You can choose the best book if you want reading a book. As long as we know about how is important some sort of book Statistical Methods for Environmental Pollution Monitoring. You can add expertise and of course you can around the world by just a book. Absolutely right, simply because from book you can know everything! From your country until foreign or abroad you will be known. About simple point until wonderful thing you can know that. In this era, we are able to open a book or searching by internet device. It is called e-book. You can utilize it when you feel fed up to go to the library. Let's examine.

George Gentry:

The book Statistical Methods for Environmental Pollution Monitoring can give more knowledge and information about everything you want. So just why must we leave the best thing like a book Statistical Methods for Environmental Pollution Monitoring? Several of you have a different opinion about publication. But one aim that book can give many facts for us. It is absolutely correct. Right now, try to closer with the book. Knowledge or details that you take for that, you can give for each other; it is possible to share all of these. Book Statistical Methods for Environmental Pollution Monitoring has simple shape but you know: it has great and massive function for you. You can look the enormous world by open up and read a e-book. So it is very wonderful.

Tracy Cluck:

Typically the book Statistical Methods for Environmental Pollution Monitoring will bring you to the new experience of reading some sort of book. The author style to spell out the idea is very unique. If you try to find new book to see, this book very suited to you. The book Statistical Methods for Environmental Pollution Monitoring is much recommended to you to see. You can also get the e-book in the official web site, so you can more easily to read the book.

Ann Conley:

Playing with family inside a park, coming to see the marine world or hanging out with buddies is thing that usually you have done when you have spare time, then why you don't try factor that really opposite from that. Just one activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition info. Even you love Statistical Methods for Environmental Pollution Monitoring, you may enjoy both. It is great combination right, you still wish to miss it? What kind of hang type is it? Oh come on its mind hangout men. What? Still don't get it, oh come on its named reading friends.
