Norbert Wiener

Extrapolation, Interpolation, and Smoothing of Stationary Time Series, with Engineering Applications

Norbert Wiener

2013 Reprint of 1949 Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. This is the second book by Norbert Wiener on time series and communication engineering. While the first one, "Cybernetics", treated the subject from a general standpoint and was more philosophical than mathematical, the present volume is more technical than theoretical, and forms a kind of companion piece to the first. It is intended as a tool for engineers working in the field of electrical communication and related subjects. The book consists of an introduction, five chapters, and three appendices. After explaining the general outline of the problem in the introduction, the author gives in Chapter I a review of generalized harmonic analysis which is necessary for the understanding of the following chapters. Chapters II and III are devoted to the problems of prediction and filtering respectively. In Chapter IV there is given a brief account of the theory of multiple prediction, that is, the theory of prediction when we deal with more than one time series at the same time. Finally, in Chapter V there is given a short discussion on the application of similar methods to a problem of approximate differentiation.

From reader reviews:

Anna Raynor:

What do you in relation to book? It is not important together with you? Or just adding material when you need something to explain what your own problem? How about your extra time? Or are you busy man? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? Everyone has many questions above. They need to answer that question since just their can do this. It said that about guide. Book is familiar in each person. Yes, it is appropriate. Because start from on kindergarten until university need that Extrapolation, Interpolation, and Smoothing of Stationary Time Series, with Engineering Applications to read.

Roderick Grubb:

The actual book Extrapolation, Interpolation, and Smoothing of Stationary Time Series, with Engineering Applications will bring you to the new experience of reading any book. The author style to elucidate the idea is very unique. If you try to find new book to study, this book very suitable to you. The book Extrapolation, Interpolation, and Smoothing of Stationary Time Series, with Engineering Applications is much recommended to you you just read. You can also get the e-book from your official web site, so you can more easily to read the book.

Joseph Rankins:

In this particular era which is the greater individual or who has ability in doing something more are more valuable than other. Do you want to become certainly one of it? It is just simple solution to have that. What you need to do is just spending your time not very much but quite enough to experience a look at some books. On the list of books in the top checklist in your reading list is definitely Extrapolation, Interpolation, and Smoothing of Stationary Time Series, with Engineering Applications. This book which can be qualified as The Hungry Inclines can get you closer in growing to be precious person. By looking way up and review this reserve you can get many advantages.

Nancy Byrom:

A lot of guide has printed but it is unique. You can get it by online on social media. You can choose the most effective book for you, science, comedy, novel, or whatever simply by searching from it. It is called of book Extrapolation, Interpolation, and Smoothing of Stationary Time Series, with Engineering Applications. Contain your knowledge by it. Without leaving behind the printed book, it might add your knowledge and make you actually happier to read. It is most essential that, you must aware about reserve. It can bring you from one spot to other place.
