Lightning and Its Spectrum: An Atlas of Photographs Leon E. Salanave

Dust jacket notes: "If at first glance you think this is merely a collection of spectacular photographs, look again. Lightning may command awe and respect, but it has been rendered far more understandable - thanks to advances made by scientists like Leon Salanave. By applying astronomy's slitless spectroscopic techniques to the study of lightning, Salanave helped make possible the accumulation of hundreds of quality photographs that have advanced scientific knowledge tremendously. Lightning and Its Spectrum reproduces more than one hundred such photographs - many never before published - that depict both typical appearances and unusual forms like bead and ribbon lightning, as well as spectra and rare lightning events. Photographers will find a wide range of techniques discussed: time exposures, swing-camera techniques, moving- and fixed-film variations, use of the H-alpha filter, spectrum adaptations, and telephoto applications. While lightning's nature is meticulously delineated for the benefit of general readers, its more technical aspects are revealed to make this book a lasting contribution to the literature of natural sciences."
