Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering)

Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering)

Simulation based on mathematical models plays a major role in computer aided design of integrated circuits (ICs). Decreasing structure sizes, increasing packing densities and driving frequencies require the use of refined mathematical models, and to take into account secondary, parasitic effects. This leads to very high dimensional problems which nowadays require simulation times too large for the short time-to-market demands in industry. Modern Model Order Reduction (MOR) techniques present a way out of this dilemma in providing surrogate models which keep the main characteristics of the device while requiring a significantly lower simulation time than the full model.

With *Model Reduction for Circuit Simulation* we survey the state of the art in the challenging research field of MOR for ICs, and also address its future research directions. Special emphasis is taken on aspects stemming from miniturisations to the nano scale. Contributions cover complexity reduction using e.g., balanced truncation, Krylov-techniques or POD approaches. For semiconductor applications a focus is on generalising current techniques to differential-algebraic equations, on including design parameters, on preserving stability, and on including nonlinearity by means of piecewise linearisations along solution trajectories (TPWL) and interpolation techniques for nonlinear parts. Furthermore the influence of interconnects and power grids on the physical properties of the device is considered, and also top-down system design approaches in which detailed block descriptions are combined with behavioral models. Further topics consider MOR and the combination of approaches from optimisation and statistics, and the inclusion of PDE models with emphasis on MOR for the resulting partial differential algebraic systems. The methods which currently are being developed have also relevance in other application areas such as mechanical multibody systems, and systems arising in chemistry and to biology.

The current number of books in the area of MOR for ICs is very limited, so that this volume helps to fill a gap in providing the state of the art material, and to stimulate further research in this area of MOR. *Model Reduction for Circuit Simulation* also reflects and documents the vivid interaction between three active research projects in this area, namely the EU-Marie Curie Action ToK project O-MOORE-NICE (members in Belgium, The Netherlands and Germany), the EU-Marie Curie Action RTN-project COMSON (members in The Netherlands, Italy, Germany, and Romania), and the German federal project System reduction in nano-electronics (SyreNe).

From reader reviews:

Jason Dolly:

The book Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering) make one feel enjoy for your spare time. You can use to make your capable a lot more increase. Book can to be your best friend when you getting anxiety or having big problem together with your subject. If you can make reading through a book Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering) to be your habit, you can get far more advantages, like add your capable, increase your knowledge about many or all subjects. It is possible to know everything if you like wide open and read a publication Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering). Kinds of book are a lot of. It means that, science reserve or encyclopedia or other folks. So , how do you think about this publication?

Andrew Comer:

Here thing why that Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering) are different and trustworthy to be yours. First of all reading through a book is good but it really depends in the content from it which is the content is as delicious as food or not. Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering) giving you information deeper including different ways, you can find any book out there but there is no publication that similar with Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering). It gives you thrill studying journey, its open up your personal eyes about the thing that will happened in the world which is possibly can be happened around you. You can actually bring everywhere like in park your car, café, or even in your method home by train. If you are having difficulties in bringing the branded book maybe the form of Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering) in e-book can be your alternative.

Ronald Meyers:

Now a day folks who Living in the era wherever everything reachable by connect to the internet and the resources inside can be true or not involve people to be aware of each data they get. How individuals to be smart in getting any information nowadays? Of course the correct answer is reading a book. Looking at a book can help people out of this uncertainty Information particularly this Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering) book since this book offers you rich info and knowledge. Of course the information in this book hundred per-cent guarantees there is no doubt in it you may already know.

Stephen Stansbury:

Often the book Model Reduction for Circuit Simulation (Lecture Notes in Electrical Engineering) has a lot details on it. So when you read this book you can get a lot of advantage. The book was published by the very famous author. This articles author makes some research prior to write this book. This kind of book very easy to read you may get the point easily after looking over this book.
