# Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques (The Springer International Series in Engineering and Computer Science)

Shaharuddin Salleh, Albert Y. Zomaya

**Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques (The Springer International Series in Engineering and Computer Science)** Shaharuddin Salleh, Albert Y. Zomaya  
*Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques* advocates the viability of using fuzzy and annealing methods in solving scheduling problems for parallel computing systems. The book proposes new techniques for both static and dynamic scheduling, using emerging paradigms that are inspired by natural phenomena such as fuzzy logic, mean-field annealing, and simulated annealing. Systems that are designed using such techniques are often referred to in the literature as 'intelligent' because of their capability to adapt to sudden changes in their environments. Moreover, most of these changes cannot be anticipated in advance or included in the original design of the system.

*Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques* provides results that prove such approaches can become viable alternatives to orthodox solutions to the scheduling problem, which are mostly based on heuristics. Although heuristics are robust and reliable when solving certain instances of the scheduling problem, they do not perform well when one needs to obtain solutions to general forms of the scheduling problem. On the other hand, techniques inspired by natural phenomena have been successfully applied for solving a wide range of combinatorial optimization problems (e.g. traveling salesman, graph partitioning). The success of these methods motivated their use in this book to solve scheduling problems that are known to be formidable combinatorial problems.

*Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques* is an excellent reference and may be used for advanced courses on the topic.

**From reader reviews:**

**Eric Graves:**

Reading a reserve can be one of a lot of pastime that everyone in the world adores. Do you like reading book thus. There are a lot of reasons why people enjoyed. First reading a guide will give you a lot of new information. When you read a book you will get new information mainly because book is one of many ways to share the information as well as their idea. Second, examining a book will make a person more imaginative. When you reading through a book especially hype book the author will bring you to imagine the story how the character types do it anything. Third, you can share your knowledge to other people. When you read this Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques (The Springer International Series in Engineering and Computer Science), you may tells your family, friends and also soon about yours guide. Your knowledge can inspire different ones, make them reading a publication.

**Mary Parker:**

Spent a free time for you to be fun activity to try and do! A lot of people spent their spare time with their family, or their friends. Usually they carrying out activity like watching television, gonna beach, or picnic inside the park. They actually doing ditto every week. Do you feel it? Do you need to something different to fill your personal free time/ holiday? Can be reading a book may be option to fill your totally free time/ holiday. The first thing that you will ask may be what kinds of book that you should read. If you want to test look for book, may be the reserve untitled Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques (The Springer International Series in Engineering and Computer Science) can be very good book to read. May be it might be best activity to you.

**Lenore Cortez:**

Reading a book to get new life style in this season; every people loves to examine a book. When you learn a book you can get a great deal of benefit. When you read ebooks, you can improve your knowledge, due to the fact book has a lot of information on it. The information that you will get depend on what types of book that you have read. In order to get information about your review, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this kind of us novel, comics, and soon. The Scheduling in Parallel Computing Systems: Fuzzy and Annealing Techniques (The Springer International Series in Engineering and Computer Science) will give you a new experience in studying a book.

**Steven Craig:**

A lot of book has printed but it differs from the others. You can get it by world wide web on social media. You can choose the most beneficial book for you, science, comic, novel, or whatever simply by searching from it. It is referred to as of book Scheduling in Parallel Computing Systems: Fuzzy and Annealing

Techniques (The Springer International Series in Engineering and Computer Science). Contain your knowledge by it. Without departing the printed book, it may add your knowledge and make you actually happier to read. It is most critical that, you must aware about reserve. It can bring you from one spot to other place.
