Motivated by the explosion of molecular data on humans-particularly data associated with individual patients-and the sense that there are large, as-yet-untapped opportunities to use this data to improve health outcomes, *Toward Precision Medicine* explores the feasibility and need for "a new taxonomy of human disease based on molecular biology" and develops a potential framework for creating one.

The book says that a new data network that integrates emerging research on the molecular makeup of diseases with clinical data on individual patients could drive the development of a more accurate classification of diseases and ultimately enhance diagnosis and treatment. The "new taxonomy" that emerges would define diseases by their underlying molecular causes and other factors in addition to their traditional physical signs and symptoms. The book adds that the new data network could also improve biomedical research by enabling scientists to access patients' information during treatment while still protecting their rights. This would allow the marriage of molecular research and clinical data at the point of care, as opposed to research information continuing to reside primarily in academia.

Toward Precision Medicine notes that moving toward individualized medicine requires that researchers and health care providers have access to very large sets of health- and disease-related data linked to individual patients. These data are also critical for developing the information commons, the knowledge network of disease, and ultimately the new taxonomy.

From reader reviews:

Kiley Kaufman:

Book is actually written, printed, or highlighted for everything. You can realize everything you want by a guide. Book has a different type. To be sure that book is important issue to bring us around the world. Close to that you can your reading proficiency was fluently. A reserve Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease will make you to become smarter. You can feel a lot more confidence if you can know about every little thing. But some of you think that will open or reading some sort of book make you bored. It isn't make you fun. Why they might be thought like that? Have you in search of best book or suitable book with you?

Jessica Peacock:

The book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease has a lot of knowledge on it. So when you check out this book you can get a lot of benefit. The book was published by the very famous author. Tom makes some research prior to write this book. This particular book very easy to read you can find the point easily after scanning this book.

Thomas Kelly:

That reserve can make you to feel relax. This particular book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease was colourful and of course has pictures on the website. As we know that book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease has many kinds or type. Start from kids until adolescents. For example Naruto or Investigation company Conan you can read and believe you are the character on there. Therefore , not at all of book are make you bored, any it makes you feel happy, fun and loosen up. Try to choose the best book in your case and try to like reading in which.

Eugene Brown:

A lot of book has printed but it is different. You can get it by net on social media. You can choose the top book for you, science, comic, novel, or whatever by means of searching from it. It is referred to as of book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease. You'll be able to your knowledge by it. Without departing the printed book, it can add your knowledge and make an individual happier to read. It is most important that, you must aware about guide. It can bring you from one place to other place.
